C405.2 Mandatory Lighting Controls – shall comply with one of the following:

Lighting Controls Sections C405.2.1 through C405.2.5

Scope: Lighting controls for interior and exterior. Alterations of greater than or equal to 50% of luminaire replacements or greater than 10% of new lighting system luminaires.

Exceptions: Lighting controls are not required in areas:

- Dwelling units
- · Designated as security or emergency areas that require continued lighting
- Interior exit stairways, ramps and passageways
- · Emergency egress lighting that is normally off

Automatic off controls

Automatic off controls				
C405.2.1 Occupancy sensor controls • Auto off within 30 min (C405.2.1.1.1) • Manual turn off (C405.2.1.1.3)	 Primary exceptions: Dwelling units Designated as security or emergency areas that require continued lighting Interior exit stairways Interior exit ramps and passageways Emergency egress lighting that is normally off 	Required in: • Classrooms • Lecture • Training rooms • Conference • Copy / Print rooms • Meeting • Multipurpose rooms		
C405.2.1.1 Manual ON or partial Auto ON • Manual ON or Auto ON to < 50% power	 Primary exceptions: Full auto ON is permitted ONLY within these spaces Public corridors, stairways, restrooms, primary building entrance, lobbies Where manual ON would endanger the safety or security of occupants 	 Lounge Break rooms Private offices Restrooms Storage rooms Janitorial closets Locker rooms Enclosed spaces 300sq ft or less Warehouse 		
C405.2.1.2 Occupant sensors in warehouses • Automatically reduce power by > 50% when unoccupied • Independent aisle controls	Primary exceptions: Does not need to comply with auto off, manual or partial on or manual Off provisions of C405.2.1.1			
C405.2.2 Time-Switch controls • Requires manual override (C405.2.2.2) • Override for less than 2hrs • Override not larger than 5,000 sq ft	 Primary exceptions: Sleeping units Patient care spaces Where auto OFF would endanger safety of occupant 24 / 7 Lighting Shop and lab classrooms Mall concourse, auditoriums sales, areas, manufacturing facilities and sports areas allow override to be > than 2hrs and control of < 20,000 sq ft 	Required in: Areas where occupancy sensor is not used, time- switch must be used		
Manual controls				
C405.2.2.2 Manual Light-reduction controls • Manually reduce lighting uniformly >50%	Primary exceptions: • Daylight responsive control zones • Corridors, lobbies, electrical rooms and mechanical rooms • One luminaire with < 100W	Required in: Choose between switching or dimming light reduction controls		
C405.2.2.3 Manual controls • Occupants have ready access • Controlled lighting is visible	 Primary exceptions: Remote manual controls are allowed if a lighting status indicator is included. 	Required in: All spaces where required by this code Choose between switching or dimming manual controls		
Daylight responsive controls				
 C405.2.3 Daylight-responsive controls Continuously dim lighting in offices, classrooms, laboratories, library reading rooms All other spaces may use automatic dimming or ON / OFF control Configured to completely shut off controlled lighting Must have calibration access within the controlled space 	 Primary exceptions: Spaces where patient care is directly provided Dwelling units and sleeping units Specific application lighting (C405.2.4) Sidelit zones on 1st floor above grade in Group A-2 and Group M occupancies 	Required in: • Spaces with >150W of general lighting within primary daylight zone (C405.2.3.2)		
Specific application controls				
 C405.2.4 Specific application controls Controlled separately from general lighting in the space 	Primary exceptions: • None	Required in: Display and accent Lighting in display cases Supplemental task lighting Under cabinet / shelf lighting Lighting equipment for sales Lighting education or demonstration Plant growth Food warming		

	and the second se	
 C405.6.1 (ASHRAE 90.1, 8.4.2) Automatic receptacle control At least 50% of receptacles and 25% of feeders to modular furniture shall auto off by either: Time schedule - <= 2hr override, control area <= 5,000 ft² Occ sensor with 20 min off delay Automated signal that shall auto off receptacles within 20 min 	 Primary exceptions: Equipment operating 24 / 7 Where auto control would endanger safety or security 	Required in: • Private offices • Print / copy rooms • Individual workstations • Conference rooms • Break rooms • Classrooms
Exterior lighting controls		
 C405.2.5 Exterior lighting controls Exterior lighting automatically turn off when daylight is present Façade or landscape lighting shall have automatic off controls based on dawn / dusk and a set open / close time All other lighting must be automatically reduced by >30% by No later than midnight to 6AM 1hr after business close to 1hr before open When unoccupied for 15 minutes Shall include exterior time-switch control functions 	 Primary exceptions: Emergency lighting that is normally off Lighting for health and safety Covered vehicle entrances Where required for safety, security or eye adaption 	Required in: • Parking lot • Area lighting • Site lighting
Additional efficiency options		
C406.1 Additional efficiency packages Comply with one or more of the following: • More efficient HVAC (C406.2) • Reduce lighting power density (C406.3) • Reduce lighting to 90% of Table C405.2.(1) • Enhanced Lighting Controls (C406.4) • Onsite supply of renewable energy (C406.5) • Dedicated outdoor air system (C406.6) • High-efficiency water heating (C406.7)	 C406.4 Enhanced digital lighting controls Luminaires shall be continuous dimming Luminaires shall be individually addressable Not more than four luminaires in a group allowed Not more than eight luminaires in a daylight zone Reconfigured by digital addressability Load shedding and individual user control in open offices Occupancy sensors shall be reconfigured digitally Construction documents include sequence of operations Functional testing (C408.3) 	
Functional testing		
C408.3 Functional testing A registered design professional must provide evidence that the lighting control system has been tested, calibrated, adjusted and is in proper working order with the construction decuments.		

with the construction documents.

- Test requirements:
- Occupant sensor controls (C408.3.1.1)
 Time-switch controls (C408.3.1.2)
- Daylight responsive controls (C408.3.1.3)
- Documentation requirements (C408.3.2)

How Cooper Lighting Solutions control systems help meet Florida - Energy Code (2017):
