SAVE THESE INSTRUCTIONS

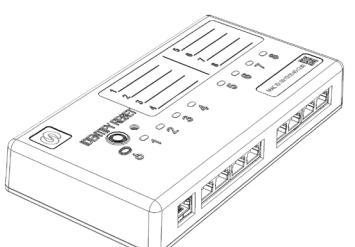

This installation instruction is for the WaveLinx Area Hub (WAH-C-POE-ID) that connects multiple areas controlled by WaveLinx CAT devices with the WaveLinx Area Controller.

This document covers installation of the following product.

- WAH-C-POE-ID - WaveLinx Area Hub
- Note: WAH-C-POE-ID may be powered from a PoE injector. If an injector is used, WPOE2-120 from Cooper Lighting Solutions is required.

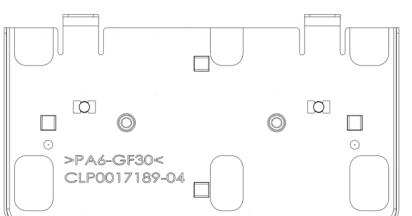

Where to mount the WAH

- Typically installed above the drop ceiling or high on the wall in the center of the space it will be controlling
- Within 300ft (91m) of the PoE switch or building LAN connection point

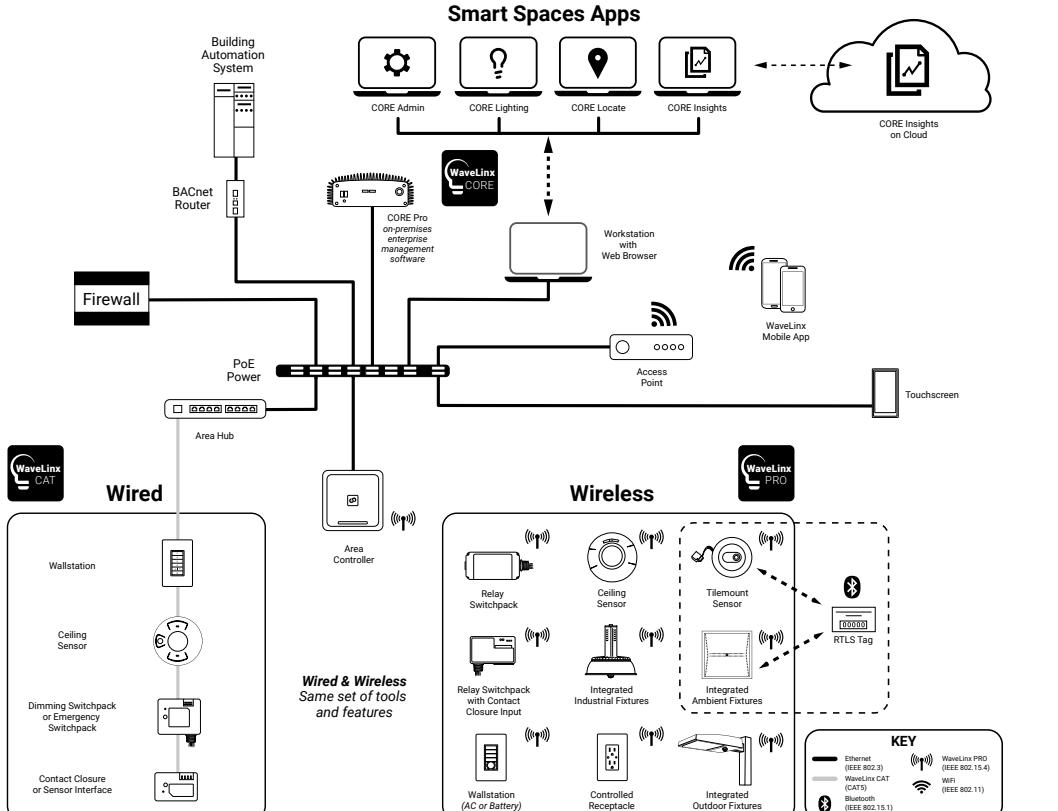

Mounting bracket installation

- Use #6 screws (not included) appropriate for the installation

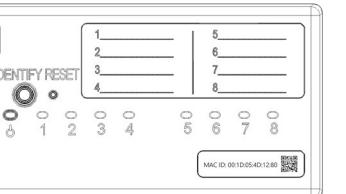

WaveLinx System Architecture

WaveLinx CAT design best practices

Design Consideration	Best Practice	Maximum Capability
CAT devices per port	20	40
CAT devices per WAH	150	200
Zones per Area	3	16
Scenes per Area	16	16
WAC range (indoor WCL devices)	150ft (45m) LOS ¹	300ft (91m) LOS ²
WAC range (outdoor WCL devices)	See sensor spec sheets	
Device hops beyond WAC (indoor / outdoor)	4 / 10	5 / 10

- Notes:
1 Considering two (2) interior walls of standard construction
2 Considering no LOS obstructions (walls, columns, etc.)

WaveLinx CAT Area Hub LED Indicators

The Area Hub has one Status LED and 8 LEDs on 8 CAN ports. The LED indicators can be used for diagnostics and troubleshooting.

The Area Hub blinking pattern for the 8 port LEDs.

State	Event	Blink Pattern
No Cable Plugged (Bus Off / Bus Disconnected)	N/A	Port X LED: OFF
Port Fault Present (Bus Passive)	N/A	Port X LED: Red stays on when CAN Bus fault is present
Port Identification (One Port Identified at a time)	Identification Button Pressed	Port X LED: Magenta for 1 s, OFF for 1 s for the identify duration X = 1 to 8 depending on Button Pressed (See WVX-1094)
Port in Normal Condition (Bus Active)	N/A	Port X LED: Same as Area Hub status LED's

- Notes:
1. Not all states are implemented in all devices. If the state does not exist for a device, then the associated LED indication is not applicable.
2. Blink pattern priorities, where multiple cases apply:
a. No Cable Plugged
b. Port Fault Present
c. Port Identification
d. Port in Normal Condition

The Area Hub blinking pattern for the Status LED

State	Event	Blink Pattern
Out of Box/Factory Reset/Standalone Mode (Not Connected to WAC yet)	N/A	Green for 1 s; OFF for 1 s; Repeat
OOB with IP Address Assigned	N/A	Green LED stays On
Paired/Connected to WAC	N/A	White LED stays On
Lost Connection With WAC	N/A	Green for 300 ms; White for 300 ms; OFF for 2.4 s. [Green with White tail]
Fault Present	N/A	Red LED stays on when fault is present
AH Identification	Identification Request from WebUI	Magenta for 1 s, OFF for 1 s Repeat for identify
Firmware Update	N/A	Cyan for 1 s; OFF for 1 s; Repeat for update duration
Factory Reset	Reset Button Pressed	Yellow for 0.5 s, OFF for 0.5 s 10 s <= Button Pressed <= 15 s
Reboot/Soft Reset	Reset Button Pressed	All LEDs turns OFF Button Pressed for 1 s
Authentication Reset	Reset Button Pressed	Blue for 0.5 s, OFF for 0.5 s 3 s <= Button Pressed <= 5 s

- Notes:
1. Not all states are implemented in all devices. If the state does not exist for a device, then the associated LED indication is not applicable.
2. Blink pattern priorities, where multiple cases apply:
a. Factory Reset
b. Authentication Reset
c. Reboot/Soft Reset
d. Fault Present
e. Identification
f. Firmware Update
g. OOB with IP Address
h. OOB (not Connected to WAC)
i. Lost Connection to WAC
j. Paired/Connected to WAC
