About ArchiDMX

ArchiDMX is an advanced DMX playback controller that's designed to fit into a single-gang electrical wall box. ArchiDMX can be operated by the five customizable buttons on it's face or via infrared remote control.

To program ArchiDMX, you can either use the free ArchiDMX Studio software (if the station is equipped with the wireless StationLink feature and you have a ArchiDMX USB Adaptor for your computer) or via the optional IR Programmer's Remote.

The ArchiDMX User's Manual contains information about installing, setting up and programming ArchiDMX as well as several detailed programming examples and technical information about the station hardware.

Need Help?
