

Fail-Safe

DESCRIPTION

The Fail-Safe CFF is designed for use in horizontal or non-laminar air flow clean rooms. The enclosed and gasketed housing and one-piece, outside flanged door protect against infiltration of airborne bacteria. The die formed edges on the door frame and the hole-free design of the housing prevent air exchange between the fixture and plenum, allowing relamping without contamination of the clean areas. UL/cUL listed for wet locations under covered ceilings.

SPECIFICATION FEATURES

Application

The CFF is suitable for use in I.E.S. Class 100, 1,000, 10,000 and 100,000 clean room environments. Applications include clean rooms, technical and biomedical labs, food processing/testing centers and pharmaceutical labs.

Fasteners

Flush mounted, stainless steel machine screws secure through captive cage nuts in housing and are evenly spaced to compress gasketing on all sides.

Housing

Die-formed, 20 ga. CRS with tightly butted and seam welded, sealed end caps. Contains no holes that would allow air passage. Standard white high reflectance polyester powder coat finish. Stainless steel and aluminum available.

Finish

High gloss, electrostatically applied, white powder coat finish, average minimum reflectance 92%.

Hinge

Two braided, stainless steel cables on one side of door provide hinging.

Door

One piece, 18 ga. steel door with baked white polyester powder coat, fully gasketed, outside door with dieformed edges eliminates seams which could entrap microscopic contaminants. Stainless steel and aluminum available.

Gasket

White, closed cell, Flexiseal™ gasketing surrounds perimeter of lens to seal lens to door frame and around perimeter of door to seal door to housing. Another layer seals fixture to ceiling system after installation.

Access

A gasketed access plate on top of the housing with two flattened, 7/8" diameter knockouts allows connection of vapor tight conduit fitting. Optional, above ceiling, top access door for luminaire maintenance is available and ideal for food processing and cleanroom applications.

Lens

Lens is clear Pattern 12 acrylic with prisms positioned inside fixture and smooth surface on the outside for easy cleaning.

Lamps

By others.

Lens Retention

Unique, Particulock™ lens retention system utilizes continuous, 18 ga. media clampdowns to sandwich gasketing and integrate lens and door frame for even environmental seal.

Ballast

Electronic, Class P, CBM/ETL ballast.

Listings

UL/cUL listed for wet location under covered ceilings. IP66 rated for standard die-formed steel, stainless steel, and aluminum doors.

- Notes:**
- 1 Refer to Lens Ordering Guide for additional lens choices.
 - 2 For specific electronic ballast, specify brand and catalog number.
 - 3 Consult your Cooper Lighting Solutions Representative for dimensional details.
 - 4 The KSH25 provides improved visual performance and wide angle distribution. This lens has an integral pattern designed so that the prisms face the lamp cavity and still supply superior photometrics. Highly recommended for all high tech manufacturing environments.
 - 5 EM Pack not available with (2)T5 ballasts.
 - 6 AM not available with brushed finish stainless steel.
